3COM

The 3Com® AirConnect™ 11Mbps Wireless LAN PC Card, a 16-bit, 5-volt, Type II PC Card for notebooks, opens a new era of mobility for your enterprise network. Working with the 3Com AirConnect 11Mbps Wireless LAN Access Point (or any 802.11b standards-based access point), the AirConnect PC Card gives your workforce seamless connectivity to the network throughout the entire campus. Without having to pull cables or make a physical connection, users can set up ad hoc conferences in minutes, or travel between offices or buildings without breaking their connections.

In today's business environment, the enterprise LAN has become increasingly vital in providing access to mission critical resources such as e-mail, enterprise resource planning applications, and corporate intranets. At the same time, the corporate workforce has become highly mobile with greater use of laptops, cellular phones and hand-held devices. The only remaining constraint is wiring.

It's ironic that business users can connect instantly which their partners across the world, but cannot maintain that connection while moving to a conference room across the hall. Should the company then choose to convert that conference room into a training room, it takes a huge investment in materials and labor merely to run cabling for new Ethernet ports.

3Coms AirConnect 11Mbps Wireless LAN solution solves the problem of modern networking needs by offering simple reliable connectivity when and where you need it. Airconnect enables users to experience the many benefits of Wireless LANs by allowing them to:

Provide network access in hard-to-wire locations
Provide easy network access in conference rooms and public areas

Ensures connectivity between remote branch offices
Ensures hassle-free connectivity in spaces that are frequently reconfigured
